Apache Module mod_proxy_connect

Description:	`mod_proxy` extension for `CONNECT` request handling
Status:	Extension
Module Identifier:	proxy_connect_module
Source File:	proxy_connect.c

Summary

This module *requires* the service of `mod_proxy`. It provides support for the `CONNECT` HTTP method. This method is mainly used to tunnel SSL requests through proxy servers.

Thus, in order to get the ability of handling `CONNECT` requests, `mod_proxy` and `mod_proxy_connect` have to be present in the server.

> **Warning**
>
> Do not enable proxying until you have secured your server[1]. Open proxy servers are dangerous both to your network and to the Internet at large.
