

## Apache Module `mod_proxy_ftp`

<b>Description:</b>	FTP support module for <code>mod_proxy</code>
<b>Status:</b>	Extension
<b>Module Identifier:</b>	<code>proxy_ftp_module</code>
<b>Source File:</b>	<code>proxy_ftp.c</code>

### Summary

This module *requires* the service of `mod_proxy`. It provides support for the proxying FTP sites.

Thus, in order to get the ability of handling FTP proxy requests, `mod_proxy` and `mod_proxy_ftp` have to be present in the server.

### Warning

Do not enable proxying until you have secured your server<sup>1</sup>. Open proxy servers are dangerous both to your network and to the Internet at large.
