

Apache Module `mod_proxy_http`

| | |
|---------------------------|--|
| Description: | HTTP support module for <code>mod_proxy</code> |
| Status: | Extension |
| Module Identifier: | <code>proxy_http_module</code> |
| Source File: | <code>proxy_http.c</code> |

Summary

This module *requires* the service of `mod_proxy`. It provides the features used for proxying HTTP requests. `mod_proxy_http` supports HTTP/0.9, HTTP/1.0 and HTTP/1.1. It does *not* provide any caching abilities. If you want to set up a caching proxy, you might want to use the additional service of the `mod_cache` module.

Thus, in order to get the ability of handling HTTP proxy requests, `mod_proxy` and `mod_proxy_http` have to be present in the server.

Warning

Do not enable proxying until you have secured your server¹. Open proxy servers are dangerous both to your network and to the Internet at large.
